Upgrade Your Accounting Solution and Reduce Risk with Abila MIP Fund Accounting

It is essential for growing nonprofit organizations to have the correct tools in place to properly track financial data. Information from an accounting solution should be easy to access and enable key stakeholders to analyze reports and make informed decisions.

Abila MIP Fund Accounting is a configurable nonprofit-focused accounting solution that helps nonprofits stay organized, make informed decisions and report with ease. You can tailor MIP with modules that make the most sense for your organization.

**Track money back to specific grants, funds, programs and other sources**
MIP provides a segmented chart of accounts structure, allowing you to easily configure segments to track specific funding sources and expense assignments. During the implementation phase, you have access to an MIP expert to guide you through the process of setting up chart of accounts tables so your organization can fully leverage the power of tracking transactions right from the start.

**Reports make critical financial decisions easier**
MIP provides a built-in reporting tool, which means you can easily create reports without complex processes or external applications. A comprehensive set of preconfigured reports are available right out of the box, including a host of financial statements and General Ledger reports that will enable accounting staff to hit the ground running. The reporting system also offers powerful customization options including cross fiscal year reporting to present financial results in a variety of ways for funders, board members, key stakeholders and colleagues. Export options allow you to extract information in a variety of formats including Excel, PDF and mobile access.

**Easily maintain budgets in varying time periods**
With MIP, nonprofits can create budgets for any time period, including cross-fiscal year and grant year. You can enforce budgets control with a single click, and activate warnings when there is a risk of overspending. This feature is also popular because of its forecast capabilities and “what-if” financial planning scenarios.

**Access from anywhere, at any time**
With today’s on-the-go lifestyle the ability to access the most current financial data away from the office is essential. Abila MIP Fund Accounting is mobile and provides you full access to key data, and allows you to perform key tasks on a smartphone or tablet.

**Detect fraudulent activity within your organization**
MIP Fund Accounting provides a number of reporting and configuration options to help detect when fraudulent activities might be taking place, including alerts triggered by suspicious activity, like large cash disbursements, suspicious transactions or changes to internal controls. With comprehensive reporting capabilities, you can help simplify the audit process and suggest how your organization can safeguard its most sensitive information. MIP Administrators can also restrict specific end-users or user groups from accessing confidential information, such as employee salaries or other departments’ budgets.
User friendly design
Navigation throughout the accounting system is easy for end-users of all skill levels. The Abila MIP report writer is built directly into the application enabling you to focus on your organization's financial matters rather than devote precious time to learn external applications to run reports.

Abila MIP single user package for smaller organizations
With 25 modules available in MIP, your organization can pick and choose the modules that are specific to finance operations.

- General Ledger
- Accounts Payable
- Accounts Receivable Reporting
- Data Import/Export
- Bank Reconciliation
- Budgeting
- Accounts Receivable
- Forms Designer

Implementation
We make every effort to make the implementation experience as easy as possible, while keeping your data secure.

Implementation includes:

- Discovery sessions with all appropriate parties to ensure all technical and project requirements are understood and the project plan is agreed upon.
- Set-up and configuration of the solution based on the requirements laid out by the project team.

- Project management tools and frequent status updates.
- Various levels of data conversion depending on your organization's needs.
- Conversion of data from the previous solution, so you can jump right in to using the product immediately after introduction.
- Elimination of duplicate accounting entries during the conversion process.

Abila University
MIP classes are a great way to learn about varying functions and roles within the finance organization, data entry and best practices for reporting. You can take advantage of a wide selection of training classes through Abila University, plus obtain CPE credits. Training classes are offered online, in regional sites across the country, and at Abila headquarters in Austin, Texas.

Customer Support
We're passionate about serving our customers and helping each one fulfill their mission. Abila provides you with access to a variety of valuable services delivered from our Customer Support analysts, and includes:

- Troubleshooting problems encountered when installing or using the software.
- Answering questions or clarifying product functionality.
- Offering suggestions for the most effective ways to use the software.
- Providing guidance on how to recover from data-entry mistakes.

Summary
Abila MIP Fund Accounting is more than just a financial software system. It is a combination of powerful products and services that are designed to help you and your organization achieve success.
